28/02/26 Ejercicio 3

Scribe

$$g(x) = -5x^6 - 4x^4 + x + 1 \quad [a, b] = [0, 1.5] \quad e_r < 8\%$$

$$f(a) = f(0) = -5(0)^6 - 4(0)^4 + 0 + 1 = 1$$

$$f(b) = f(1.5) = -5(1.5)^6 - 4(1.5)^4 + 1.5 + 1 = -74.7$$

$$f(a) \cdot f(b) < 0$$
